Curious about how security systems work, how they fail, and how they can be improved. Build practical tools around problems worth solving, then break and test them to learn what needs to change.

EDUCATION

M.S. Cybersecurity, Stevens Institute of Technology — Hoboken, NJ	Aug 2024 – May 2026
Coursework: Advanced Cryptography, TCP/IP, Systems Programming, Privacy in a Networked World	GPA: 3.43/ 4
B.Tech. Computer Science Engineering, Vellore Institute of Technology — Bhopal, India	Aug 2020 – May 2024
Minor: Cybersecurity	GPA: 7.92/ 10

TECHNICAL SKILLS & CERTIFICATIONS

Security: Detection Engineering, Threat Investigation, Incident Response, SIEM Monitoring, Log & PCAP Analysis, IAM, Adversary Emulation, AI/LLM Security, Threat Intelligence

Tools & Platforms: Splunk Enterprise Security, Wireshark, Docker, Linux, GCP, Git/GitHub, GitHub Actions, Ollama, SQLite, Nmap, Burp Suite, Metasploit, VirusTotal API

Development: Python, Bash, TypeScript, Security Automation

Certifications: Certified Ethical Hacker (CEH) | TryHackMe: Digital Forensics & Electronic Evidence, AI Security

TECHNICAL PROJECTS

Arbiter AI — Self-Hosted AI Security Alert Triage Engine — *pre-release MVP, in active development*

Python | Local LLMs (Ollama) | Docker | SQLite | GitHub Actions

- Open-sourced a triage engine for organizations with no dedicated SOC: a deterministic pre-filter scores severity, asset criticality, context and verdict history, escalating only ambiguous cases to a locally hosted LLM so no event data leaves the host. Built around asymmetric error costs — suppression requires strong benign evidence, while uncertain or model-failed cases escalate by policy.
- Built labeled evaluation suites of 296 reproducible cases across 88 event types. A 22-case model gauntlet ranked Qwen 3.5 4B as more precise, but a 101-case realistic evaluation reversed that ranking; the larger set was used to reject the earlier conclusion.
- Found the model over-applying benign framing such as maintenance windows to disguised attacks, and moved attack-disguise checks into a non-suppressible guardrail layer the LLM cannot override. Unit tests and an end-to-end smoke run gate every commit in CI across Python 3.10–3.13.

TrustKit AI — Real-Time Voice & Vision Rental Fraud Copilot — *Google × Columbia "Build with AI" Hackathon*

Python | FastAPI | OpenCV | Vertex AI / Gemini | WebSockets | GCP

- Co-built a three-person fraud copilot that compares live virtual rental tours against listing data and external evidence, interrupting the viewer through a full-duplex voice agent the moment it detects a discrepancy.
- Contributed the backend frame extraction, metadata analysis and vision-processing modules feeding OpenCV forensic scoring and Vertex AI vision inference into the reasoning pipeline; continued development with the team past the hackathon.
- Adapted the verification pipeline when listing sites restricted automated access, combining available property data with submitted media and metadata to give the agent additional evidence for comparison.

SSH Honeypot — Adversary Emulation & Attack Telemetry

Python | Docker | Kali Linux | Linux Security

- Built a medium-interaction SSH honeypot in isolated Docker containers capturing authentication attempts, commands and session activity, with no host filesystem exposure or outbound access.
- Attacked it from Kali Linux to generate controlled adversary behavior, then analyzed the captured command sequences from the defender's side.

EXPERIENCE

Cybersecurity SOC Intern | Deloitte India Oct 2023 – Jan 2024

- Investigated 30–70 alerts per day inside a five-person remote SOC supporting banking and insurance clients on Splunk Enterprise Security environments processing 2,000+ security events daily.
- Correlated logs and validated alerts against client-specific playbooks, closing non-actionable noise and escalating confirmed or suspicious incidents to Tier 2 analysts.
- Documented findings to established SOC procedure, keeping event classification consistent across client workflows.

COMMUNITY & LEADERSHIP

- **Volunteer Lead, Google Developer Group Brooklyn** (Nov 2025 – Present) — One of four volunteer leads on a six-person organizing team across 8 events; coordinate 20+ volunteers, support speakers and sponsors, and run the chapter's LinkedIn communication.
- **Graduate Badminton Club Officer, Stevens Institute of Technology** (2024 – Present) — Weekly sessions, court logistics and equipment for a 250+ member club.
- **Black Belt & National Bronze Medalist, Shotokan Karate, India** (2008–2017) — Ten years of training and multiple state level gold medals; later taught junior classes.
